

TESTING WINDOWS AND  
GLASS DOORS IS A  
**BREEZE.**  
A 77 MPH  
**BREEZE.**

What would happen if your home were blasted with 77mph winds? Would your windows and glass doors hold up to the pressure? Would they have the structural integrity? At AAMA, that's what we determine. In fact, every window and glass door design that boasts AAMA certification undergoes extensive independent laboratory testing for wind resistance. At AAMA, when we say we're committed to performance, we're not just blowing hot air.

TESTING FOR WATER LEAKAGE  
RESISTANCE IS A  
**GOOD**  
**THING.**  
FOR MOST OF US.

Early morning drizzle. Quick afternoon storms. Torrential overnight downpours. Day after day, night after night, it's a relentless assault on your home. That's why every window and glass door design that displays AAMA certification undergoes a battery of independent laboratory tests to measure resistance to water leakage. Why do we put windows and doors through so much? Because Mother Nature does.

WE TAKE THE BRUNT OF THE  
**FORCE**  
SO YOU DON'T HAVE  
TO FEEL A  
**THING.**

Sure, the possibility of a two-by-four flying through your windows is pretty far-fetched. But what about a tree limb? A baseball? A roofing tile? That's why every window and glass door design that bears the AAMA label for impact resistance has passed a battery of independent laboratory tests. But why would these technicians go to such extremes? Because we're obsessed with windows and glass doors. We're obsessed with quality. We're obsessed with protecting you.

**NOBODY IS**  
**MORE**  
COMMITTED TO  
**WINDOW**  
**AND DOOR**  
PERFORMANCE THAN  
**WE ARE.**

# AAMA STANDS FOR YOU.

When it comes to windows and glass doors, we have only one thing in mind. You. That's why we created the AAMA Certification Program. For a manufacturer's products to pass our certification tests, they have to meet or exceed stringent standards. And to earn an AAMA certification label, those products must maintain that quality during production. In fact, as part of the program's quality assurance requirement, AAMA Certification Program manufacturers must submit to two surprise plant inspections a year.

<small>QUALITY CONTROL &amp; TESTING</small> <b>AAMA CERTIFICATION PROGRAM</b> <small>ACCREDITED BY: AMERICAN NATIONAL STANDARDS INSTITUTE</small> <small>VALIDATOR: ALP</small>		<small>Series: XXX XX</small> <small>AAMA/WDMA/CSA 101/1.S.2/A440-05</small> <small>HS-R15-1600 x 1100 (63 X 44)</small>
<p>If you demand superior air and water leakage resistance and structural strength from your windows and glass doors, then look for the AAMA certification label.</p>		
<p>So, if you want the window design you've chosen to provide superior resistance to air and water leakage and wind pressure, be sure to look for the AAMA certification label. After all, when it comes to windows and glass doors, nobody is more committed to quality than AAMA.</p>		 <p>Still want to learn more? Then log onto <a href="http://www.aamanet.org">www.aamanet.org</a>. It's the ideal place for window and door manufacturers, architects, builders and homeowners to discover all the benefits of AAMA certification.</p>
